

KOBELT CABLES TIE IT ALL TOGETHER.

Even our cables are designed to complement the ruggedness of our push/pull control heads and accessories. Made entirely of stainless steel with waterproof casing and control ends, these cables will give years of smooth trouble-free service.

KOBELT QUALITY

Since 1962, Kobelt has built a global reputation for the design and manufacture of marine steering and propulsion system controls and related accessories. Our international leadership is based on a relentless search for design and engineering improvements, beautifully machined components of enduring die-cast bronze and stainless steel, plus deliveries and prices that are competitive world-wide. Behind it is a simple guiding principle: we believe that if we get you where you're going, you'll get us where we're going.

(Kobelt Products either carry a patent or the patent is pending.)

KOBELT

MECHANICAL MARINE CONTROL SYSTEMS

KOBELT PUSH/PULL CONTROL SYSTEMS FOR DURABLE SIMPLICITY

Our reputation for superior marine controls and steering systems is international – spanning over 23 countries and backed by 35 years of experience.

We are the only company to use die-cast bronze components and stainless steel hardware *exclusively*. Our patented, 5 year warranty systems deliver longer and

more reliable performance than any of our competitors. No shortcuts are taken in the design of our in-house manufacturing and assembly. Kobelt's reputation for quality is known throughout the world and we felt there was a definite need to give the average small boat owner products they could depend on.

KOBELT CONTROL HEADS

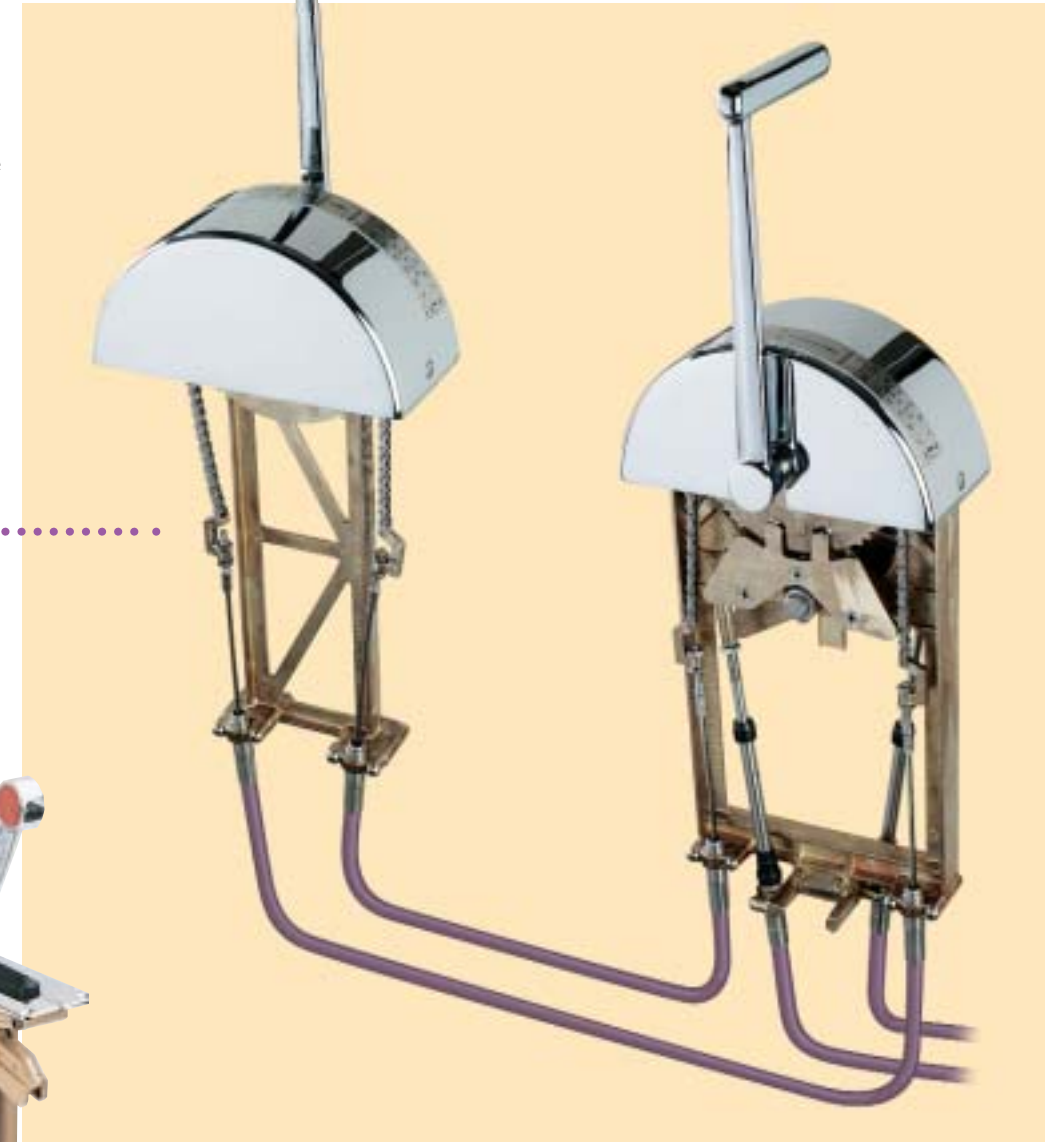

Designed specifically for one-station control systems, Kobelt has engineered into each push/pull control head the precision and strength to ensure long accurate and corrosion-free service. Kobelt also produces complete systems for wire-over-pulley, pneumatic and electronic requirements.

2090 SERIES TWO-STATION CONTROL SYSTEM

The 2090 Series is the only control of its type in the world, and offers the ultimate in simplicity, performance and durability. Both handles move together allowing only 4 cables to control a complete single-engine two station single lever system. Other two-station setups require the system be placed in neutral before changing stations. The clutch and engine speed must then be re-established. For this reason the 2090 Series has proved to be a tremendous success.

2016 SERIES CONTROL LEVERS

Constructed entirely of bronze and stainless steel, the 2016 Single, stackable flush-mount control levers can be combined to suit customer requirements and an almost unlimited variety of control functions can be accomplished.

All Kobelt equipment comes with a 5-year warranty that is the best in the industry. Strict quality control manufacturing and sturdy corrosion-resistant materials ensure trouble-free service above and beyond this generous warranty period.
